## ABOUT ME

*I'm a junior software developer with experience and interest in both front-end & back-end.*

With an academic background in IT, I am a confident developer who's eager to learn and improve continuously. I specialize in JavaScript alongside other technologies such as the MERN stack, NextJS, TypeScript, ReactJS, GraphQL, Redux, Git and more.

## SKILLS

JavaScript

ReactJS

MERN Stack

Redux

TypeScript

## EDUCATION

Master of IT in Software Development

University of Technology Sydney

2020-2022

Bachelor of Media and Communication

Macquarie University

2014-2017

## EXPERIENCE

Junior Web Developer

Coderoo/Sydney, Australia/2020-2022

Junior web developer working on:

- development of basic back-end modules
- front-end development using HTML/CSS/JS/ReactJS/Redux
- basic development of databases using MongoDB

## PROJECTS

[Goal Setter App](#)

Created a RESTful API from scratch with Node.js, Express, MongoDB and Mongoose. Secured the API by adding JWT authentication. Created the frontend using React and added authentication using Redux Toolkit to manage the global state. Added CRUD functionality.

[Project Management App](#)

Built a simple full-stack project management system with GraphQL, Express, MongoDB, React, Bootstrap and Apollo. Used GraphQL to create schema types (client and project), to create queries for getting all clients/single client, all projects/single project as well as mutations for CRUD functionality. Used Apollo to update the cache (displaying changes on UI when new data is added/removed). Used MongoDB to store and fetch data.
